

SONO

better to the core

Introducing SONO, the German-made innovation in waterproof flooring, featuring stunning direct-to-surface HD printing and a ceramic-based core that's full of benefits and 100% free of toxic chemicals.

What makes SONO *better*?

SONO offers a whole new range of benefits. From superior stability and durability to stunning HD direct-to-surface printing, SONO is simply better. And better for you. Because SONO is also 100% free of toxic chemicals, meaning it's completely safe for you and your family.

Made Without PVC, Formaldehyde, Phthalates & Plasticizers

SONO's ceramic composite core makes it a healthier option as it is made without harsh, toxic chemicals and contains no PVC, formaldehyde, phthalates or plasticizers.

100% Waterproof

Because SONO is a ceramic-based floor, it is 100% waterproof. This makes it great for installations in kitchens, bathrooms or below grade.

Low Maintenance

SONO floors are easy to clean and do not require special or expensive cleaning agents. Just a quick sweep & damp mop are all that's needed to keep them looking their best.

Recyclable

As a mineral-based raw material, SONO is produced with careful use of resources and is 100% commercially recyclable and recoverable.

Light Yet Strong

Due to its lower material density, SONO is a lightweight product, making it easier to work with. Yet because it is a heavy duty material, it is extremely robust and strong.

Highly Certified

SONO is GREENGUARD Gold certified in North America and Blue Angel certified in Europe for the highest standard of environmental responsibility.

What makes SONO *better*?

Easy Installation

Score and snap the planks for a dust-free installation with no power tools. In addition, the patented Push2Loc angle-drop installation system makes it even faster and easier to install.

State of the Art Visuals

Thanks to high-definition digital printing technology, SONO delivers ultra realistic wood and stone visuals.

Dimensional Stability

SONO's unique composition offers exceptional dimensional stability. There is no swelling, expanding or contracting under various temperature & humidity levels.

Better Acoustics

SONO absorbs sound, giving it better acoustics and making it quiet under foot when compared to traditional wood or laminate flooring.

Commercial Grade

SONO's hard-wearing lacquered surface, SEALtec+, makes it suitable for residential and high traffic commercial projects.

No Fade or Stain

SONO floors look as good as new for years to come with high stain resistance and without fading in sunlight.
